The work included in my e-portfolio reflects my commitment to the common good and strongly aligns with the mission and values of the University of St. Thomas. Throughout my academic journey, I have focused on using technology as a force for positive impact. My projects—such as developing applications that promote motivation and wellness, building systems that enhance cybersecurity and data awareness, and creating solutions that help others reflect on their habits—demonstrate my drive to combine innovation with purpose.

Beyond academics, my volunteer experience with Second Harvest Heartland strengthened my understanding of community and service. Working alongside others to pack and distribute food to families in need reminded me of the importance of collaboration, compassion, and using one's abilities to serve others. These experiences have deepened my appreciation for the University's emphasis on advancing the common good and forming leaders who act wisely and work for justice.

Overall, my e-portfolio illustrates how I aim to merge my technical skills, leadership experience, and values to make meaningful contributions to both the tech industry and the broader community. It represents my journey toward becoming a thoughtful and ethical professional who seeks to use innovation to uplift others and make a lasting difference in the world.
